Professional Summary

Full Stack Developer skilled in building responsive frontend applications and secure backend systems using React, Java, Spring Boot, REST APIs, MySQL, Spring Security, and JWT. Strong foundation in Core Java, OOP, collections, exception handling, layered architecture, and API integration. Experienced in developing practical projects with authentication, role-based access, database persistence, admin workflows, caching, and clean UI design.

Technical Skills

Languages: Java, JavaScript (ES6+), HTML5, CSS3

Frontend: React, Bootstrap, Material UI, Responsive Design

Backend: Spring Boot, Spring Security, REST APIs, JWT, Spring Data JPA

Database/Caching: MySQL, Redis

Tools: Git, GitHub, VS Code, IntelliJ IDEA, Eclipse, Maven

Concepts: OOP, MVC Architecture, Layered Architecture, Authentication, Authorization, API Integration, System Design Basics

Deployment & Hosting: Render, Netlify, Railway

AI Tools: ChatGPT, Claude, GitHub Copilot, OpenAI Codex

Projects

Banking Management System

Java, Spring Boot, Security, Thymeleaf, MySQL, JWT

Live Demo: bankingsystem-34mb.onrender.com

- Built secure banking app with registration, login, dashboard, balance enquiry, deposits, withdrawals, fund transfers, transaction history, and PDF statement export.
- Implemented Spring Security with role-based access for users/admins, session login for web pages, and JWT authentication for protected REST APIs.
- Developed admin module for user management, account blocking, password update, transaction monitoring, balance operations, and loan processing.
- Added loan workflow with application, approval/rejection, EMI calculation, EMI payment tracking, transaction audit records, and service-layer validations.

Journal App Backend System

Java, Spring Boot, Security, Redis

- Built Spring Boot backend using Controller, Service, Repository layers with clean REST API structure and modular business logic.
- Developed secured CRUD APIs for journal entries with authentication, authorization, DTO-based request/response handling, and validation.
- Integrated Redis caching to reduce repeated database calls, improve response performance, and maintain clean backend design.

Smart News App

React, Vite, JavaScript, NewsAPI, React Router

Live Demo: smartnewsbyadi.netlify.app

- Built responsive news application using React with NewsAPI integration for real-time article fetching.
- Implemented category-wise news filtering, keyword search, and multi-language support using URL query parameters.
- Added infinite scrolling with paginated API loading and reusable components for navbar, footer, and news cards.
- Designed mobile-responsive article cards with fallback images, source name, publish date, and external article links.

E-Commerce Web App

React, Vite, Redux Toolkit, Redux Saga, React Router, Bootstrap

- Developed a responsive e-commerce frontend using React with modular component-based structure.
- Used React Router for page navigation and Redux Toolkit with Redux Saga for scalable state management.
- Integrated UI features such as product sections, carousel/slider components, notifications, and form validation.
- Designed responsive layouts using Bootstrap and custom styling for mobile, tablet, and desktop screens.

Education

IIMT University, Meerut

2022 – 2025

Bachelor of Computer Applications (BCA)

Delhi Global School, Mawana, Uttar Pradesh

2021

Class XII, PCM, CBSE

Strengths

Problem-solving mindset | Quick learner | Full-stack project ownership | Clean code practices | API-first thinking
| Strong debugging approach
